

APP SERVICE

1. App service is a Paas service used to host web applications, Apis, Mobile Backends with automatic scaling, security and no server management.
2. We don't need to worry about OS, patches, infrastructure. Azure will handle everything.

Languages supported by azure:

1. Java
2. Python
3. .net
4. php
5. Node js

Example: suppose we built a java web application

1. instead of creating vm + installing java + tomcat
2. just deploy the code to app service
3. Azure will run it

For this I have created two app services in a same region one service is for old version and another version is for new version. Following are the images

App Service Versioning x App Services - Microsoft Azure x Zomato Food Menu x <title>Zomato Food Menu - Vi... x +

This is app service01 for old version

This is app service02 for new version

Advantages of using app service:

1. Easy to use
2. Fast deployment
3. Low maintenance
4. Scalable
5. Security

Advantages of using two services:

1. Avoiding downtime
2. Safe testing before going live
3. Easy Rollback (Go back if any problems happens)
