

BASTION

Azure Bastion is a managed service that allows you to securely connect to virtual machines (VMs) using RDP/SSH directly from the Azure Portal, without using a public IP.

HOW IT WORKS:

BENIFITS:

- ✓ Improves security
- ✓ No exposed ports (22/3389)
- ✓ Centralized access
- ✓ Easy to manage

This is the virtual Machine I have created for bastion.

This is the credentials that I have created connecting machine using ssh in a azure portal.

Microsoft Azure Portal screenshot showing the 'vnet-westus3' Subnets page. The page displays a table of subnets within the virtual network.

Name	IPv4	IPv6	Available IPs	Delegated to	Size
SUBNET-01	172.16.0.0/24	-	250	-	-
AzureBasti...	172.16.1.0/26	-	59	-	-

The interface includes a left-hand navigation pane with options like Overview, Virtual network, NAT gateways, Public IP addresses, Network interfaces, Network security groups, Application security groups, Bastions, Route tables, and Route servers. The right-hand pane shows the 'Subnets' tab selected, with a search bar and a list of subnets.

Microsoft Azure Portal screenshot showing the 'Sudheer-vm' Bastion page. The page displays system information and update status for the virtual machine.

System information as of Fri Feb 6 11:07:23 UTC 2026

System load: 0.0 Processes: 134
Usage of /: 5.7% of 28.02GB Users logged in: 0
Memory usage: 4% IPv4 address for eth0: 172.16.0.4
Swap usage: 0%

Expanded Security Maintenance for Applications is not enabled.
0 updates can be applied immediately.
Enable ESM Apps to receive additional future security updates.
See <https://ubuntu.com/esm> or run: `sudo pro status`

The list of available updates is more than a week old.
To check for new updates run: `sudo apt update`

The programs included with the Ubuntu system are free software;
the exact distribution terms for each program are described in the
individual files in `/usr/share/doc/*/copyright`.

Ubuntu comes with ABSOLUTELY NO WARRANTY, to the extent permitted by
applicable law.

To run a command as administrator (user "root"), use "sudo <command>".
See "man sudo_root" for details.

azureuser@Sudheer-vm:~\$

This is the Result that I have got finally after connecting in azure portal itself using ssh.
